QSG Helps Fundamental Equity Managers Improve Returns

October 3, 2005 (Naperville, Ill.) - Traditional equity investment managers are increasingly looking for ways to benefit from the consistency and efficiency of quantitative investment techniques. QSG has developed a consulting based approach that is helping traditional managers successfully integrate the speed and broad coverage of systematic research with their unique fundamental insight. "What we offer is a way for an equity analyst or manager to focus on innovating, without the burden of information overload or missing a lesson from the past. Our service effectively provides a net under the investment high-wire that many top growth managers perform on," says Tim Sargent, QSG's President.

"People don't want a black box or a solution that isn't created to their unique process," continues Mr. Sargent. "Our tools are designed by ex-portfolio managers and fundamental analysts, and our independence, reputation for accuracy and willingness to customize solutions for clients has fueled impressive growth in this area."

QSG has become the analytics partner of choice for many of the largest and most successful fundamental equity managers in the US. The company delivers custom stock selection models to clients through its Virtual Research Analyst (VRA) platform, and this service is supported by collection of seasoned equity analysts. The VRA platform provides a number of innovative visualization techniques that speed signal interpretation and delivers a competitive advantage.

QSG's solution is crafted with the fundamental analyst and investment manager in mind. "We help fundamental analysts and managers uncover the potential in specific segments of the market", adds Bola Olusanya, Manager of the Virtual Research Analyst. "By harnessing computing power to help analysts and PMs uncover new ideas faster, we enable our clients stay ahead of market." Active managers can now get the systematic advantages of model-based process, while preserving the innovation and forward-looking advantages of their fundamental approach.

"You would be surprised how many fundamental investment managers rely on systematic tools to speed new idea generation, validate an investment's potential or generate an exit signal," says Mr. Olusanya. "I can't imagine a professional equity manager accepting anything less than our products' transparency and ability to adapt to an ever-changing market."
